

UBIX Democratizes AI and is a critical extension of IT Infrastructure and Teams to empower knowledge centers with a powerful capability allowing them to innovate rapidly across the organization while removing backlog from IT teams.

Current Analytic Challenges

Application and Analytic Needs are requested by knowledge centers from IT to deliver on. 95% of the headcount are knowledge workers with 5% responsible for delivering on requests resulting in an overburdened Tech team with ever growing backlog and

Further challenged by the need to translate requirements and knowledge from the subject matter experts to the technology teams resulting in potential failures in both the transfer of knowledge and the misinterpretation of domain expertise.

Business Knowledge Centers

Democratized Analytics

Empowering knowledge workers / business professionals with the power to execute on their subject matter expertise in building analytical outcomes results in creating a powerful innovation engine with 95% of the staff devoted to it vs 5%.

Knowledge Centers are empowered with the tools necessary to solve their own problems for 90% of their needs resulting in only 10% of their specific analytic needs being routed to IT for resolution, creating a nice balance of demand and resources.
